Re: Surfacing sewage

On February 17, 2006 this office received a complaint from Mr. Ed Marble, owner of 2834 E. Cherry, indicating he had surfacing sewage at the property to the North of him. City maintenance crews checked our lines and found no problem. I told Mr. Marble that I would refer this complaint to the Health Dept. because they deal with this type of problem on private property and there was no problem with the City sanitary sewer line. I contacted the Health Dept. and informed them of the problem and gave them Mr. Marble's name and telephone number (Cell Phone No. 224-2122). On February 23, 2006 Randy Lyman called me (9:15 A.M.) and said that Mr. Marble had contacted Robert Schaefer and said that the Health Dept. told him to call because it was a City sanitary sewer problem. Randy called me to see if I could run by that location and see if I could find out what was going on. I arrived at approximately 10:30 A.M. and contacted one of construction personnel who were remodeling 2834 E. Cherry for Mr. Marble. He showed me where the sewage was surfacing in two places on this property. One surfacing point was just Southwest of 2834 and the other was located at the Southwest corner of the property (2834). It appeared to me to be the private line coming from 2822 E. Cherry. This line crosses over 2834 E. Cherry property to reach the City sanitary sewer. I went to 2822 E. Cherry and talked to the resident to see if I could put some dye in their drains to see if it surfaced at 2834 E. Cherry. The dye did appear on Mr. Marble's property. I talked to the homeowner (Mr. Brad Simmons) of 2822 E. Cherry when he arrived home for lunch. I showed him the problem and he immediately called a plumber. The plumber was going to be out by 3:30 P.M. to take of the problem. I called Mr. Marble and told him about what we found and that a plumber was going to be out to correct the problem.
